Red Oxide Cement Colour 20kg Pail

Product Images

Short Description

20kg pail of Cement Australia red cement oxide. Provides a high quality and reliable way to improve the aesthetics of concrete, mortars and renders through coloured finishes.

Description

The Cement Australia Oxides range gives you unlimited possibilities to improve the aesthetics of concrete, mortars and renders through coloured finishes. Australian Cement oxides are a high quality rich colour additive available in 1kg packs or large 20kg pails. These UV resistant powders will provide long lasting colour to a wide range of projects.

Oxide allows for the contractor to control the dose and therefore the depth of colour. The red oxide lightens slightly over the first 5 days as the cement cures. Ensure your ratio percentage is based on the cement content only, as oxide will not colour sand or stone. For best results, follow the instructions on the Oxide pack carefully. Always accurately measure all ingredients, including water; and for multiple mixes, always use the same quantities. For lighter, deeper colours use either White or Off White Cement or Render. Black, brown and red work best in Grey Cement. Sand can also affect colour, so source enough sand in one purchase to complete your project.

The maximum colour saturation you can achieve is 10% oxide addition of the cement content. Therefore you can avoid wastage and weakening of your mix by not overdosing on oxide.

Features:

- Reliable and predictable colouring
- Beautiful, long-lasting coloured finishes
- Less cost and less hassle for upkeep of coloured mortars, renders, and concrete
- Suitable for DIY through to commercial projects
- 20kg Pail

Additional Information

CODE	41-ROX20
Colour	Red
Suits Substrate	Cement, Concrete, Mortar
Brand	Cement Australia
Size	20 kg
