

Stillage For Builders Props

Product Images

Short Description

Made from heavy duty galvanised steel this stillage will hold your props neatly and securely.

Description

This steel stillage is designed as a compact storage rack for builders props. Made from heavy duty galvanised steel this stillage will hold your props neatly and securely. Consisting of a rigid frame with open horizontal shelves, this unit helps to reduce the risk of toppling during upright storage, thereby contributing to a safer workplace. Props are held up off the ground on the stillage, allowing rain and dirt to wash away. This prevents props from sitting in pools of water or accumulating large amounts of dirt and debris in the yard. By storing them lying flat rather than leaning against a wall, they cannot accidentally fall over and cause harm.
