Description

Builders plastic, heavy duty sheeting, ideal for general protection, as a moisture barrier, concreting, asbestos removal, landscaping and more. Jaybro's 44-BLKPLASAS is approved to AS2870:1996 and has a multitude of uses in construction, civil, building, road and landscaping works.

The recent adoption of AS2870 Residential Slabs and Footings into the Building Code of Australia mean that approved black plastic can be used in situations laid out in the code. This includes situations such as concrete underlay, ie: when service trenches pass under slab footings. Black plastic of an approved thickness must be used. This heavy duty black builders film or black plastic can be used as a membrane barrier to prevent moisture ingress (note it's best to always check the design recommendations for your individual project).

- Approved style, complies with Australian Standard AS2870:2011
- Also suitable for dust, debris and asbestos removal
- Size: 50m x 4m
- Material weight 200µm
- Also available in orange and clear on request
