
Heavy Duty Scaffold Netting 50 x 1.8m

Product Images

Short Description

Scaffold Netting in 1.8m high x 50 m long roll, offering 50% Blockout. Choose the required colour from the drop down below. Our range of scaffold netting is designed to increase safety onsite. Acting as a protective barrier to control dust, debris and falling items. Used on construction or demolition sites, scaffolding netting is a shade cloth like material that covers the scaffold structure. Installed to protect workers and pedestrians in and around the base of scaffolding.

Description

Scaffold netting, commonly referred to as debris netting and construction netting has a wide variety of applications for your construction site. Available in green or blue, it provides 50% UV blockout, allowing more light than product such as chain & shade netting.

Scaffold netting is an effective tool to help reduce the risk of dropped objects falling from height on the building site. In addition, it can be used to cover temporary fencing and increase privacy, and reduce dust and debris from escaping the area.

Also known as scrim it is both economical and highly practical. Scaffold netting shade cloth allows wind to pass through easily, resulting in a lightweight load on the structure it is attached to.

In addition scaffold netting can come in handy as a privacy or debris screen for other projects, such as festivals, sporting events, civil constructions and roadworks. It can be easily fixed to temporary fencing or other structures, or can be used in a myriad of other ways.

Features:

- 50 metre rolls
- 1.8 metre wide
- 50% UV Blockout
- Reduces dirt and debris from escaping the site
- Great for enclosing scaffolding and preventing dropped items from causing damage
- Lightweight and easy to install
- Available in blue or green
