

Standard Brace For Temporary Fencing

Product Images

Short Description

Standard Brace / Stays, suits Fortress Fencing 3000 Series temporary fence panels. Ideal for use in high wind areas, for fencing with banner mesh or shade cloth installed, or for installations in high pedestrian or vehicle traffic areas.

Galvanised finished, suits Polyblok bases and requires a coupler clamp to attach to the fence panel.

Description

Designed to increase stability on temporary fencing runs in high wind and public areas. Long straight runs of temporary fencing are prone to blowing over in high winds. Ensure your erected fencing remains upright with the appropriate bracing.

Fortress Fencing recommends 1 standard brace every 3rd panel in high wind areas and the use of bracing is also recommended in high traffic areas to ensure public safety.

Each fence brace requires 1 x heavy duty coupler and 1 x polyblok fence foot, and is designed to suit the Fortress Fencing 3000 Series temporary fence panel.

For more information on when and how to brace your temporary fence, check out our blog post on [temporary fence braces](#).
