

Heavy Duty Temporary Fence Brace

Product Images

Short Description

Heavy Duty Brace / Stays, suits Fortress Fencing 3000 Series temporary fence panels. Ideal for use in high wind areas, for fencing with banner mesh or shade cloth installed, or for installations in high pedestrian or vehicle traffic areas.

Galvanised finish, suits 2 x Polyblok bases and requires a coupler clamp to attach to the fence panel.

Description

Heavy duty fencing braces provide additional stability for temporary fencing installations in windy and public areas. The use of privacy screens, banner mesh and shade cloth increases the chance of fencing blowing over in high winds.

The heavy duty brace provides a stronger base than our standard brace, but uses 2 polyblok feet instead of one.

Jaybro recommends using 1 brace every 3rd panel in windy areas or when the installation is in a heavy traffic areas in order to improve safety. Braces requires 1 x heavy duty coupler and 2 x polyblok fence feet, and are designed to suit the Fortress Fencing 3000 Series panel.

For more information on when and how to brace your temporary fence, check out our blog post on [temporary fence braces](#).
