

mastaTEX® Concrete - 5/20

Product Images

Short Description

mastaTEX® Concrete is a needle punched composite, consisting of concrete-sand mix, embedded and fixed between two layers of geo-textile.

Description

mastaTEX® Concrete is a needle punched composite, consisting of concrete-sand mix, embedded and fixed between two layers of geo-textile. It is much faster and cheaper to install than conventional materials, and our strict quality control of raw materials makes the finished product fail-proof.

It provides a substrate for direct applications of a thin protective layer of regular concrete, which may be used in various weather conditions. The fabric is fastened to an outer part with nails, which provides a solid water-resistant surface stabilisation, further braced thanks to internal reinforcing fibres.

MASTATEX® CONCRETE CASE STUDIES

- Effective scour protection for critical border bridge
- Geosynthetic Cementitious Composite Mat for Native Fish Hatchery
- Redlands Council Landfill Cap Swale Drain
