

FREDrain® ULTRA Strip Filter

Product Images

Short Description

Available in 300mm widths, by 25mm thick and come in 50m Rolls. A full range of fittings are available with the system for fast and easy installation.

Description

FREDrain® ULTRA Road Edge strip filter is a composite cusped drain consisting of a three dimensional, high-flow drainage core which is wrapped with a non-woven filtration geotextile. It is designed to replace a conventional sand or gravel covered pipe trench drain by providing a far greater surface area for water to infiltrate/pass, resulting in faster, more efficient drainage.
