

Crowd Control Barrier Gate - Orange

Product Images

Short Description

Crowd Control Barrier - Orange with a unique two-point locking system ensuring panels come together with ease and remain secure. Ideal for managing and directing pedestrian and patrons around constructions sites, at events and festival or as a visual warning of hazards.

ADDITIONAL FREIGHT CHARGES MAY APPLY - You may be contacted about freight cost for heavy, bulky or awkward items. Call us for details on 1300 885 364.

Description

Orange powder-coated crowd control barriers are highly visible to both pedestrians and motorists. Recommended for night work and low light applications like tunnels.

Interlocking free standing barriers are fast to install, durable and provides pedestrian safety first and foremost.

Featuring a double interlocking hinge point that provides excellent stability, this hinge system makes installation quick and easy, and panels are designed with removable feet that can be taken off during stacking and storing.

Low intrusion feet reduce the chance of pedestrian trips & falls and come with pre-drilled holes for bolt-down applications. This in turn provides maximum safety to workers and general foot traffic. Each barrier is fully galvanized and powder coated to ensure maximum life in the outdoors. Jaybro's crowd control barriers are fully welded, hard-wearing and lightweight, which makes them easy to install and handle. Designed for rapid deployment to create a stable exclusion barricade, these barriers are ideal for events, temporary pedestrian thoroughfare changes, and demarcating no-go zones.

Safely transport up to 42 barrier panels per pallet with specialised stillages (available separately from Jaybro). The tubular steel design of our crowd control barrier is extremely robust, lightweight and can be lifted by one person.

Jaybro supplies crowd control barriers that are suitable for civil and construction work sites; events and festivals; increasing public safety and security; forming a visual barricade; pedestrian control during road works; creating an exclusion zone and cordoning off areas.

Specifications:

- Two-point locking system
- High visibility orange powder coat finish
- Rugged steel construction
- Hinges and feet designed for easy set up and pack down
- Stillages available for sale separately, to safely transport pallet quantities of 42 around your site
