

DB 80 F-Shape - DB FLEXCORNER

Product Images

Short Description

DB 80 F-Shape - DB FLEXCORNER

Description

DELTABLOC® DB FLEXCORNER

The DB Flexcorner was developed as an optional accessory to the DB 80 F-Shape, which enables a safe, flexible connection between elements. The DB 80 F-Shape elements can be placed at variable angles between 180° and 90° to each other. The DB Flexcorner is intended to provide greater flexibility of installation in restricted spaces or for tighter curves with small radii. The Flexcorner can be used with both the T150S as well as the K150S type systems.
