

Self Adhesive Butyl Pavement Marker Pad

Product Images

Short Description

Pavement Marker Tar Pad with double sided adhesive surfaces, for quick and easy installation of RRPMS, pavement markers, Cats Eyes and more to temporary roadwork zones. Ideally suited for temporary or construction zone situations. They feature a double sided adhesive with removable paper covers. These quick and easy pads require no heating of road surface or marker pad prior to use.

Description

Ideal for installation of pavement markers, these self adhesive tar pads take just seconds to install. Use tar pads instead of mixing messy epoxy and waiting for it to cure, or wasting unused mixtures. These adhesive tar pads are ideally suited to temporary or construction zone situations, and allow closed sections of roads to be re-opened immediately. Each pad features double sided butyl adhesive with removable paper covers, and requires no heating of the road surface or marker pad itself. Self adhesive tar pads are sold individually.
