

# Amber 12V LED Magnetic Beacon

## Product Images

## Short Description

Amber 12V LED Magnetic Beacon with cigarette lighter plug and lead. Different flash patterns available using the built-in switch.

## Description

This magnetic beacon offers 12V connection via a cigarette lighter / Merit plug. Its magnetic base makes it easy to fix to the roof of your vehicle and simply store it away when not in use.

A high visibility LED strobe light and amber polycarbonate lens provides high visibility in daylight, at night, or during rain or foggy conditions on site. The strong magnetic base will stay put and ensure the light does not

slip or move in transit. An in built control switch in the lighter connection enables you to change the strobe effect to different flash patterns.

Compatible with all those vehicles equipped with a 12-24V volt cigarette adapter. Great for site and construction vehicles, trucks, forklifts, dozers, excavators and more. The housing is made from durable shatter resistant polycarbonate and is crystal cut for maximum brightness and visibility.

**Features:**

- Amber LED flashing beacon
- Uses 12 / 24 Volt cigarette lighter power
- Magnetic base
- Changeable flash patterns
