# Central Obstruction Marker Class 1 450 x 300mm

## Product Images

---

## Short Description

---

Aluminium Class 1 Reflective material, measures 450 x 300mm.

## Description

---

Hazard markers or directional signs inform and advise road users about upcoming directional hazards. They are usually used around sharp corners and where a road comes to an end. This central obstruction marker features two arrows pointing down and to the sides, indicating that traffic should flow around the obstruction which could be located in the middle of a road, such as a large island.
