

Charcoal Directional Peel N Stick Tactile

Product Images

Short Description

Directional Tactile, Charcoal / Black Peel N Stick - 300 x 300 mm

Description

Charcoal sticky directional constructible tile measuring 300 x 300 mm. Acrylic tactile indicator tiles are suitable for installation on a range of substrates. Designed to be retrofit over indoor and outdoor surfaces, the self-adhesive backing will stick to almost any flat surface. Simply peel, stick, and go for fast, easy installation. These tactiles can be walked on immediately after laying, and the low profile design can be laid on top of an existing floor with no inset required.

TGSI's or Tactile Ground Surface Indicators are tactile tiles made from porcelain, polyurethane or rubber. Tactiles are used for indicating direction and hazards for blind or vision impaired people. Available in black, ivory, grey or yellow, these tiles help with wayfinding by offering feedback on upcoming hazards such as road crossings or train platform station edges. Approved to Australian Standards, they create a safer environment and are specified by many transport authorities and civil construction firms. The correct dimensions and location in relation to the hazard is critical to ensure safe wayfinding for visually impaired people - refer to local guidelines and engineering advice for your specific project.

Ideal for:

- Railway platforms and other drop offs such as docks and wharves
- Driveways and car parks where footpaths are intersected
- Bus stops
- Stairways, ramps and escalators
- Pedestrian crossings

Features:

- Measures 300 x 300 mm
- Easy to apply
- Directional tactiles feature 4 raised bars
- Hazard tactiles feature 36 raised dots
- Made from adhesive backed acrylic
- Also available in porcelain and rubber, in ivory, charcoal, grey or yellow
