

GEOmasta PaveTex FW Grade Geotextile, 4m x 300m

Product Images

Short Description

GEOmasta PaveTex Geotextile is a paving fabric made from polyester PET filaments. Roll measures 4 metres wide x 300 metres long.

Description

mastaTEX PaveTex is a mechanically bonded paving fabric made from needle punched 100% Polyester continuous filaments. PaveTex is a specially engineered geotextile for incorporation into Geotextile Reinforced Seals (GRS) in sprayed seal treatment (chip seals) applications and as an interlayer for asphalt overlay wearing surfaces.

The unique properties of the paveTEX optimises the absorption of bitumen to create an impervious barrier to the ingress of water into the pavement whilst providing a strain alleviating membrane, resulting in an improved and extended pavement life.

Applications:

- Surface enrichment seals and re-seals in chip-stone seal applications
- Sealing of bound pavements in low volume spray seals
- Strain alleviating membrane in asphaltic concrete wearing surfaces

Additional Information

CODE	PFT1-4
U.O.M	Each
Weight	100
Brand	GEOmasta
Range / Model	mastaTEX
Material	Polyester
Length	300 m
Width	4 m
