

Traffic Controller (TC1257) 600 x 600mm Queensland Aluminium Multi Message Sign

Product Images

Short Description

Traffic controller Multi-message signage. Displaying a black pictogram of a worker on a reflective orange background with a black border.

Measuring 600 x 600mm in size and produced from durable 1.6mm aluminium. This sign is able to be used on road works and road maintenance jobs time and time again.

Please refer to states regulations and guidelines to ensure this sign is appropriate for your application.

Description

MMS traffic sign featuring a traffic controller symbol on a reflective orange background. Used to alert oncoming motorist of the presence of road workers and maintenance.

Used for traffic management during temporary roadworks. Multi-message signs convey changes to normal road conditions. Alerting approaching vehicles of traffic conditions and the presence of workers increase safety.

Manufactured to design three common size signs. The main MMS sign sizes are 600 x 600mm, 1200 x 600mm and 1200 x 300mm.

This systems main feature is the common sized signs fit within a multi-message frame. The stand sizing allows for easy interchanging of signs to suit the application at hand.

Based upon guidelines issued by state road authorities, MMS signs requirements will vary. Variations of sign messages exist between Victoria, South Australia, Queensland and Western Australia.

Jaybro supplies MMS signs manufactured from both Corflute and aluminium. The Corflute is of a 5mm thickness, lightweight and durable. A popular option due to its cost and flexible properties. The aluminium option is a 1.6mm thickness and is extremely hard wearing. The ideal choice for long term use, able to withstand harsh conditions time and time again.

Produced with a class 1 reflective finish, MMS signs are easily seen from passing a vehicle and approaching traffic.

Divided into sub-categories such as Advanced Warning series, Regulatory series, Road Conditions series, Event series and Pedestrian series and so on.

The MMS system is an substitute to traditional stand-alone signs. More noticeable than stand-alone signs because of the striking colour combination. MMS signage makes the task of displaying signs easier, quicker and cheaper. Multi-message signs are commonly used in conjunction with stand-alone signs as required.
