

Fence Mesh Individual Panels 2.4m x 1.8m

Product Images

Short Description

Custom printed fence mesh panels measuring 2.4 metres wide x 1.8 metres high. Perfect for builders or those that do not need a full roll of fence mesh. Similar to printed shade cloth but much better quality, this mesh allows excellent reproduction of printed images and logos. **Note minimum order quantity 5 panels. These are our most popular sizes, but if you require a custom size, please contact our Site branding team at 1300 885 364.**

Description

Printed fence fabric or scrim is the ideal solution for high profile brand exposure. These panels are supplied as individual panels that suit most standard temporary fence panels.

Custom printed banners improve the image of your building site, and act as an eye-catching marketing tool to promote your brand.

Jaybro provides solutions for both small and large businesses, with the ability to print as little as 5 individual mesh panels, up to kilometres of mesh on a roll for large sites.

Our premium printed banner mesh enables you to promote your project, brand or product professionally on the perimeter fencing of your location, thereby generating public awareness and delivering an outstanding first impression of your brand to clients.

Printed banner mesh is known by many names, terms like fence wrap, printed shade cloth and fencing mesh. The building and construction industry is a common market that utilises printed fence wraps for promoting worksites.

Mesh panels come with the option of eyelets every 500 mm or 1000 mm, along the top, sides and base. This makes it easy to handle and attach to temporary fence panels or cyclone fencing. The 280gsm UV treated polyester mesh allows for 20% air breathability.

We print on white fabric and can completely cover the mesh in printed photos or images, or just print your simple logo. We provide free quotes and simple artwork is included if you would like us to design your mesh panels. Alternatively you can supply us with your own ready-made design.

Banner mesh is constructed with a thinly woven Nylon core, coated with a liquid state polyvinyl chloride (PVC). The PVC dries to form the mesh finish. Whilst PVC is flammable it is a more fire resistant plastic than most general-purpose plastics because it contains more than 50% chlorine.

To further assist with reducing the chances of flammability, fire retardant inhibitors are added to the PVC composition. The inner core of Nylon represents a small volume of the overall mesh and will only be exposed if the PVC outer is burnt. Jaybro's Banner Mesh uses a fire retardant within the PVC however this has no specified fire rating.

- 2.4 metres x 1.8 metres
- Custom printed to your specifications
- Fire retardant properties
- Premium polyester mesh construction
- Eyelets every metre or half metre on all edges
- 80% mesh, 20% air flow
- Ideal for building sites

- 280gsm fabric weight
- Minimum order 5 pieces
- Full rolls of mesh also available
