## Product Images

---

## Short Description

---

Quality survey stakes, manufactured from Australian hardwood with white painted tops. Measuring 50 x 25 x 900 mm in size and sold in bundled packs of 10 stakes.

## Description

---

Australian hardwood timber survey stakes with white painted tops. Sold in pack bundles of 10, these stakes measure 50 x 25 x 900 mm in size.

Hardwood survey stakes are used during the initial stages of setup to mark out precise locations and positions. Jaybro's range of painted and unpainted harwood stakes and pegs have a proven track record of performance on site.

These stakes are ideal for the construction industry for formwork, residential and industrial building projects, concreting driveways and footpaths and more.

Other common uses for hardwood stakes are surveying, where they are used as mark-out pegs for mapping and marking boundaries. These stakes can also be used for general concreting duties, as tree stakes and for general use by landscapers.

- Premium Australian Hardwood
- Size: 50 x 25 x 900mm Painted
