

Deltabloc DB80 Concrete Sloped End Terminal 4m

Product Images

Short Description

Tapered terminal for DB80 concrete barriers

Description

Sloped end terminal to suit the Deltabloc DB80 Concrete Road Barrier.

Jaybro's Deltabloc DB80 range is widely known as a reliable and effective crash barrier. Rated 100km/hr in NSW, VIC and SA, and 80km/hr in QLD, the DB80 barrier can be installed in either rigid or semi rigid methods whilst still providing impact protection. To complement the DB80 Deltabloc barriers, Jaybro also supplies a tapered end terminal made in our Sydney precast factory.

Some applications require an approved end treatment to be installed, to ensure full compliance with local requirements. In this case, the DB80 taper barrier is the ideal choice.

For more information and specifications on concrete barriers, end treatments, crash cushions please get in touch with our barrier solutions team.
