
Sign Frame - Multi Message Frame 1200 x 900mm

Product Images

Short Description

Sign frame, 1200 x 900mm. Frame only, signs and legs sold separately.

Description

This multi message frame is suitable for holding two 600 mm x 600 mm road signs plus one 1200 mm x 300 mm sign. Made from tough steel, this sign stand is designed to be used with Y frame legs or bent tubular steel legs, both available separately.

The strong steel frame provides a stable base for warning motorists of upcoming hazards or changed road conditions. Signs easily slot into the metal sign frame and can be removed easily. Because the legs are removable, the frame can be stored flat taking up minimal space, and is easily stored away with your other traffic control gear. It is strong yet lightweight and ready to be used on a range of different projects with different requirements due to its versatile nature.

This sign frame when used with matching legs is suitable for most multi message sign systems used in Victoria, Queensland, South Australia and Western Australia. Jaybro stocks a huge range of MMS or multi-message signs for all your temporary roadwork requirements.
