

# Mains Marker Tape Non-Detectable White (Communication Main)

## Product Images

## Short Description

---

White communication mains marker tape - 500 metre roll printed with "WARNING COMMUNICATIONS CABLE BURIED BELOW". Used to warn excavators of buried cables, pipes, gas mains and other buried services. To learn more about locating underground services and staying safe during excavation work, check out our article on [avoiding mishaps during underground excavation](#).

## Description

---

Mains marker tapes are highly visible, non-adhesive plastic tapes that are buried underground. They are used to warn workers during excavation that buried gas mains, water pipes, electricity cables or other underground services are in the vicinity. They provide an early warning system to excavator operators who can easily see the tape when digging with earthmoving equipment.

The tape is laid an even distance between the surface and the underground pipe or cable, thereby giving the excavator operator an indication of how deep the services are. Marker tape creates a margin of safety before digging crews dig too deep. Underground warning tapes are chemical resistant, soil tolerant and resist rotting.

Marker tapes are also available as detectable tapes, which feature a thin metal wire sandwiched within the tape. This enables detecting equipment to pick up on the presence of buried services before any digging begins. Available in bright colours, marker tapes ensure maximum visibility. Underground tapes are also known as detectable warning tapes, detectable mesh tapes, underground hazard tapes and underground marker tapes.

### Features:

- Strong tear resistant white polyethylene
- Tape features **WARNING COMMUNICATIONS CABLE BURIED BELOW** printed in bold black
- Manufactured in accordance with AS/NZS 2648.1
- Lead free
- 500 metre roll
- Tape width 150mm
- Weight: approximately 6.75kg per roll

Mains Marker tapes also known as underground warning tapes provide a warning message to identify buried services and dangers beneath the ground.

## Brightly coloured tapes display a range of danger warnings
