

Cold Galvanising Spray 350g Silver

Product Images

Short Description

Silver liquid cold galvanizing spray, 350g, is ideal for repairing galvanised surfaces that are damaged as a consequence of scratches, welding or cutting. This industrial strength, anti-corrosive silver coating protects against rust and corrosion and dries to a matt finish.

Description

UltraColor Silver Galvanising Spray is a protective coating for steel which acts like hot dip galvanising in a convenient spray application. The 350g can provides good coverage to welds and damaged structures or components, providing industrial strength protection.

Ideal for repairing galvanised surfaces that are damaged as a consequence of scratches, welding or cutting, this industrial strength, anti-corrosive silver coating provides a matt finish.

Silver Zinc cold galvanising paint is a zinc-rich coating containing metallic zinc, which protects clean steel in the same way as hot dip galvanising. This liquid cold galvanising spray gives excellent long-term protection

against corrosion and rust. It will age to a similar colour as normal galvanising to give an even finish. It is ideally suited for touch-up welds and damaged structures.

Features:

- Durable zinc rich paint
- Fast dry
- Weld through
- For repair, fabrication and maintenance applications
- 350g spray can
- Industrial strength
- Long term protection against rust and corrosion
- Ages to a similar colour as normal galvanising
