# Straw Hay Bales for Construction and Landscaping

## Product Images

---

## Short Description

---

Straw hay bale sold in 800 x 400 x 500 mm bales. Hay bales are often used on the work site as a permeable barrier across minor drainage paths, swales and channels.

## Description

---

Sold in bales measuring 800 x 400 x 500mm. Straw hay has unlimited uses on and around construction sites. Hay can work as a cheap ground cover, laid over mud during excavation. This helps to reinforce muddy ground and keep the area cleaner. Straw bales can also reduce erosion, reducing soil from washing away after heavy rain.

Straw bales can be used for many different applications including during house construction, revegetation and planting projects, as mulch or for erosion control, as a permeable silt barrier, animal husbandry applications, gardens and food production and a range of other uses. Builders straw bales are available to buy online from Jaybro along with a wide range of other erosion control and landscaping products.

### Ideal for:

- Building sites
- Regulating or channelling surface water from running into building and construction sites
- Revegetation and planting projects
- Use as mulch or for erosion control
- Use a permeable silt barrier
- Animal husbandry applications
- Gardens and food production

### Features:

- Bales measure 800 x 400 x 500 mm
- Natural straw hay
- Pallet Qty: 20 bales
