

Barrier Bund - Yellow, 6 x 1M Lengths

Product Images

Short Description

Barrier Bund strips - 6 lengths of 40 mm x 140 mm x 1m yellow strips. Easy to install and can be driven over by forklifts and other vehicles (1t weight limit). Chemical resistant and designed for use on smooth surfaces. Max Load 1 tonne.

Description

Barrier Bund bunding strips are easy to install and can be driven over by forklifts. They are used to create

large customised spill bund areas by positioning them on the floor of a smooth surfaced area, such as a concrete warehouse floor. Supplied as a pack of 6 x 1m long strips, they fit together in a tongue and groove fashion, enabling you to position them exactly where you want in your factory or warehouse.

These heavy duty floor bunding strips are used to create chemical bunds or containment bunds, ensuring spills are contained to a predetermined area. They can be driven over by forklifts and other vehicles without deforming, and their 40mm height helps to contain most liquid spills and minimise damage to boxes or other items that may be stored nearby on the floor. Ideal for high traffic areas, they provide an effective barrier around chemical bunding, machines, equipment or even across doorways, helping to contain leaks, spills and drips. This semi-permanent bunding creates a reliable containment area for the storage of drums, tanks, machinery and equipment, and is a more cost effective option when compared to concrete hobs or other permanent structural bunding.

To ensure their effectiveness, make sure you install your barrier bund strips on smooth surfaces only.

Features:

- Size: 1 metre long x 40mm high x 140mm wide
- 6 strips per pack
- Available in black or yellow
- Drive-over design - 1 tonne weight limit
- Chemical resistant
- Must be used on smooth surfaces only
