

Loc-Socket Post Socket With Wedge for 50mm NB Posts

Product Images

Short Description

Loc-Socket post socket installation system, suits 50mm nominal bore posts.

Description

The Loc Socket post mount is an ideal solution for mounting sign posts in concrete, brick and paved areas. The heavy duty Loc-Socket has a galvanized ring and is perfect for high impact areas.

It is used by mounting the post socket flush in concrete at ground level. Then, the reusable wedge is driven down alongside the post to secure it. The Loc-Socket allows damaged sign posts to be easily removed without having to dig up concrete footings. It provides a flush and level installation - simply drive down the pin to remove the post. Can be used with fence posts, traffic signs, street signs and other sign posts.

- Reusable post footing device
- Easily remove damaged posts
- Can be driven flush into concrete
- Heavy duty galvanized steel collar
- Plated steel wedge pin included
- Use with 50mm NB sign posts
- Measures 350 mm long
- Loc-Socket Wedge Pins available separately
