

Bulka Bags 1000kg SWL

Product Images

Short Description

Bulk builders bag measuring 900 x 900 x 900 mm, 1000 kg SWL Capacity

Description

Bulka bags are also known as bulk bags, jumbo bags, builder bags, bulker bags, storage totes, FIBCs or flexible intermediate bulk containers. These versatile bags are commonly used in industries such as cement

and concreting, construction, landscaping, demolition, mining, waste management and food processing, and they can be used to temporarily store or transport all kinds of dry materials.

These jumbo tote bags measure 900 mm x 900 mm standard base dimension, and stand 900 mm tall. Bulk storage bags typically hold 1000 kgs of product. Bulka bags can be placed on pallets or lifted by standard lift loops attached to the bag. These large builders bags are used for storing and transporting free flowing dry products, such as aggregates, stock feeds, waste materials, sand, powders, granules and more. Constructed from 140gsm non laminated material, they are strong and hard wearing with a flat bottom design for easier filling and moving.

A handy document pouch on the outside of the bag is particularly useful for transporting aggregates to site.

- Measures 900 x 900 x 900 mm
- 1000 kg Safe Working Load (SWL)
- Non laminated 140 gsm fabric construction
- Circular woven
- Open top, flat bottom style
- 4 x 300 mm cross corner lifting loops
- Pallet Qty: 435

Additional Information

CODE	42-BUBAG
U.O.M	Each
Features	Open top, flat bottom style
Finish	Non laminated 140gsm
Overall Height	900 mm
Height	900 mm
