

# Hole Cleaning Wire Brush

## Product Images

## Short Description

---

Hole cleaning brushes are essential to attain strong adhesion when injecting epoxy and adhesives into holes. Choose a size from the dropdown box below.

## Description

---

Cleaning dust and debris from holes is necessary to obtain full adhesion and load capacity from epoxy and chemical anchors. Hole cleaning brushes and blowers help remove dust and debris after drilling. Starting with a clean hole is the first step to ensuring good adhesion and proper strength can be achieved. Removing dust also ensures rated load capacities are reached.

Hole cleaning brushes come in a range of sizes and can be used in combination with blower pumps and high volume pumps to remove water and debris from holes before injecting with epoxy, adhesive or other materials.

- 13mm Hole cleaning brush measures 300mm long and suits 8 – 12 mm diameter holes
- 20mm Hole cleaning brush measures 300mm long and suits 14 - 20 mm diameter holes
- 26mm Hole cleaning brush measures 300mm long and suits 20 - 24 mm diameter holes
