
Hole Cleaning Pump (High Volume)

Product Images

Short Description

Hole Cleaning Pump (High Volume) for preparing holes for chemical anchoring and epoxy placement.

Description

Cleaning dust and debris from holes is necessary to obtain full adhesion and load capacity from epoxy and chemical anchors. Hole cleaning brushes and blowers help remove dust and debris after drilling. Starting with a clean hole is the first step to ensuring good adhesion and proper strength can be achieved. Removing dust also ensures rated load capacities are reached.

This high volume hole cleaning pump suits all hole sizes and has a pump action blower with an elongated tube to direct the air right into the hole.
