

Self Drilling Countersunk Wing Screws

Product Images

Short Description

Class 3 Galvanised self-drilling screw. Manufactured with a self-embedding countersunk head and wings that remove the need for pre-drilling in timber. These screws are suitable for use in metal and timber. Very quick and easy to install with high resistance to pull-out. Available is a range of sizes from 40 mm to 75mm

Description

Specially design and manufactured self-drilling screws with a countersinking head for use on timbers, metals and composite boards. Wings remove the need for pre-drilled holes, the wings snap off during installation
