Product Images

Short Description

Pro Choice assembled half mask respirator kit complete with A1P2 Cartridges. Ask Jaybro about [respirator fit testing](#) in your area. **Limited stock.**

Description

Assembled Half Mask With A1P2 Cartridges. Kit Contains: 1 x HMTPM, 1 x pair of PCA1P2

The Maxi Mask half face respirator is a thermoplastic elastomer face piece, suitable for applications including mining, construction, rigging, agriculture, painting, chemical and lab work. The design suits most face shapes and features a contour moulded nose area for easy fitting when worn with other PPE such as glasses and goggles. This mask is also able to be worn under most welding helmets. The low breathing resistance valve reduces heat and moisture build up, increasing wearer comfort. Cartridges are easy to replace and fit easily onto the connection points. Approved to AS/NZS 1716:2012.

Included in this kit is a pair of A1P2 cartridges for particulate/gas/vapours. This pair of respirator cartridges are designed for use on the ProChoice Maxi Mask 2000 and are approved to AS/NZS1716. This A1 P2 cartridge set provides particulate protection as well as gas and vapour protection.

This kit comes pre assembled.

Included:

- 1 x Pro Choice HMTPM Maxi Mask 2000 Half Face Mask Respirator
- 1 Pair x ProChoice Gas / Vapour Cartridge A1P2
