

Chisel Point Studs - Zinc

Product Images

Short Description

Yellow zinc coated chisel point studs available in a wide range of sizes from 130mm to 300mm. Select the required size from the drop-down menu below.

Description

Chisel point studs for use with glass chemical anchoring. These anchors are manufactured with the chisel point designed to break the glass capsule, engaging the adhesive in a single, quick and clean motion. These chisel point chemical anchors are supplied with nuts and washers and the anchor has a hex external for easier installation. A depth indicator helps with inserting to the accurate depth. Yellow zinc plating increases the finish protection, offering a good level of protection against corrosion.
