

Chisel Point Studs Galvanised Construction Fasteners

Product Images

Short Description

Chisel point studs construction fasteners, made from quality 5.8 Grade carbon steel. Suitable for use with glass capsules or any adhesive injection system.

Description

Chisel point stud, non expansion type anchor fastener. Used in pre-drilled holes with a chemical adhesive or injection system.

The installation of the stud done by inserting a suitable curing resin into the pre-drilled hole using either a chemical capsule or injection adhesive. The stud is then inserted and rotated, allowing for proper setting into the resin. Note: Load can be added to the Anchor once the appropriate curing time has passed.
