
GEOmasta Water Well Green 495mm

Product Images

Short Description

The Waterwell is ideal for moisture retention around plants, and for concentrating mulch and fertilizer. It reduces mulch scattering when plants are watered from a tanker system and is installed by burying into the ground, leaving a collar around the plant. Water Wells are reusable again and again.

Description

The Water Well is ideal for assisting Councils, Urban Landscapers & Land Division Developers to help efficiently water trees during establishment as well as directing nutrients to the root zone.

Features and Benefits:

- Faster growth
- Water savings
- Concentrates mulch, fertilizer & reduces scattering by birds
- Eliminates water run off (ideal for sloping ground)
- Protects plant stems from whipper snippers & encroaching lawn
- Zip joins for easy installation
- Reusable & repositionable
- Available in heritage green or black
- 430mm top diameter
- 495mm bottom diameter

- 190mm high
- 26L water retention
- Made from UV stabilised plastic

Applications:

- Plant Protection
- Revegetation
- Gardening

Installation Guide:

- Join the sections together leaving the final joint open
- Prepare the planting hole to required plant depth and the bottom diameter width of the Water Well
- Position the plant in the hole and secure Water Well around the plant by joining the final zip
- The Water Well should be installed to the depth of half the height
- Back fill, mulch and fill with water
