

GEOmasta Plant Assist Soil Additive 10kg

Product Images

Short Description

Plant Assist is a specially blended soil additive to support newly planted tube stock and plants through the critical establishment period. It helps to create an ideal root establishment environment, retains moisture levels and is suitable for native plants. 10kg Tub, 20kg bags also available.

Description

Plant Assist is a specially blended soil additive to support newly planted tube stock and plants through the critical establishment period.

Plant Assist™ is a brilliant new product that incorporates soil & microbe friendly nutrients as well as organic water saving inputs that will provide an environment to give plants the best possible chance of establishing in all type of soil conditions. The high carbon base means that the product will have ample food for the biomass to establish around the root zone of the plants while also providing nutrient for the early stages of growth, with limited chance of burn.

The silica rich, diatomaceous earth input retains water while supplying silica for the plant: a known plant cell strengthener as well as a pathway for nutrient into the root.

Added zeolites further retain water and house all important microbes while not affecting the hydraulic conductivity of the soil in heavy conditions. Microbes, including mycorrhiza fungi & trichoderma help support and protect the root system and assist in supplying nutrient from beyond the root zone.

Kelp containing alginates and natural growth hormones not only support cell division and reduce transplant shock but also holds many times its weight in water to further assist the new plantings.

Water crystals and a natural surfactant, derived from saponins, complete this sophisticated product.

Plant Assist™ is a cost effective product that can be used on all plants, natives, tubes, turf, in pots, or in the ground.

Features:

- Helps create ideal root establishment environment
- Ideal for potting mixes or soil when planting
- Retains moisture
- May reduce transplant shock
- Will not burn roots
- Safe for Native plants
- Ideal for re-veg plant outs & tube stock
- Organic compounds assists root development
- Contains beneficial microbes & fungi

Application Guide:

- Tubes: 12g (2 teaspoons) in hole
- Pots: 80g (small handful) per 140mm pot or in hole
- Large Tubs: Up to 5% potting mix volume
- Soil Application: 200g / m² turned into top 10cms soil
- Under Turf: 200g / m² raked into topsoil
- Commercial: Apply 1 Tonne per Hectare

NOTE: Application rates are general advice only & trials on sensitive plants may be prudent. As no control can be exercised over storage, handling, mixing, application, weather, soil or plant conditions, the buyer assumes responsibility for the use of any Plant of Health products.
