

GEOmasta Plastic Sleeve Tree Guards, 500pk

Product Images

Short Description

Soft plastic tree guards are ideal for protecting young plants and tube stock, creating an environment conducive to growth. Measures 450mm high x 350mm wide. Supplied as a box of 500.

Description

These simple yet effective plastic sleeve tree guards are ideal for protecting young plants and tube stock, creating an environment conducive to growth. The non-porous plastic retains moisture around the leaves, resulting in a humid microclimate that encourages plants to thrive.

The UV stabilised sleeve helps to reduce water loss and increases the level of carbon dioxide around the plant, whilst also protecting it from wind and harsh weather.

Plastic sleeve tree guards are the most simple and cost effective solution for protecting young plants. When

combined with complementary GEMasta products such as jute mat and small hardwood stakes, they offer an extremely effective way to ensure the health and rapid growth of young plants.

Features:

- Helps create an ideal growth environment
- Retains moisture
- Protects plants from fluctuating temperatures
- Ideal for native plants
- Quick access roll dispenser makes for fast planting out
- Use with bamboo or hardwood stakes
- 500 pack
