

Extra Strength Pro 50 Concrete Mix 50MPa, 20kg Bag

Product Images

Short Description

Cement Australia PRO Strength Extra Strength Concrete Mix is a rich blend of cement with aggregate and sand. It is designed for use in projects with difficult accessibility and where a higher strength of concrete is required. 50MPa extra strength gives confidence and peace of mind for demanding jobs.

Description

Cement Australia's Extra Strength PRO-50 Concrete Mix is designed to deliver twice the strength of a standard concrete mix, so you can build with confidence for more demanding projects. Ideal for landscaping, posts, uprights and concrete repairs, this quality assured high performance blend has a high early strength gain that reduces time to complete tasks.

Just add 2 litres of clean water to one 20kg bag of PROStrength Extra Strength Concrete Mix. Carefully add up to 0.5 litre more to make the mix workable. Too much water ruins good concrete and will impact the ultimate strength performance. 110 x 20kg bags are required per cubic metre.

Features:

- Twice the strength of a standard concrete mix; made for more demanding projects
- Technically superior: 50MPa compared to approximately 20MPa for standard concrete mix
- Locally made Australian product
- Convenient and easy to use: build with confidence
- Building grade product in convenient 20kg bag for jobs where accessibility is limited
- 20kg Bag
- Pallet Qty: 48 bags

Additional Information

CODE	41-ESC
U.O.M	Each
Pallet Quantity	48
Brand	Cement Australia
Size	20 kg
Appearance / Composition	Powder
