Short Description

Connolly Dowel Cradle 6mm x 300mm Galvanised Plate Dowel, 180mm Slab

Description

Connolly Dowel Cradle assemblies are ideal for use with saw cut joints on large industrial projects. Dowel cradles or dowel baskets ensure accurate horizontal and vertical alignment of dowels is maintained during concrete placement.

Available with plate dowels in most popular lengths and slab depths, they can be used in conjunction with Connolly dowel sleeves to allow lateral movement of the dowels along the joint line.

Made from 6mm wire, the cradles form a rigid assembly capable of withstanding the harsh treatment they frequently encounter during construction activities. Made in standard 3m lengths they are easy to transport, handle and install, saving both time and money.

Features:

- Ensures dowel alignment is maintained during concrete placement
- Stable placement of dowels
- Replaces the need for Bar Chairs
- Quicker set up time on dowel installation
- Eliminates the need to tie dowels
- Single pours
- Save costs

Additional Information

CODE	40-DC6P300GALV180
U.O.M	Each
Weight	1
Material	Galvanised
Brand	Connolly
Size	180 mm
